

STOPDROP TOOLING

ABOUT

Stopdrop Tooling provides Hand Tools which have been designed to prevent dropping when Working At Height. All Tools feature permanent Stopdrop Tooling attachment points for use with the appropriate lanyard. All Tools can be secured to Stopdrop Tooling bags by use of the internal attachment points.

All Tool Lanyards come with double action screwgate carabiners which are independently tested. Screwgate carabiners are gated metal loops used to connect two components. We only use screwgate carabiners on our Lanyards because they have gates that can be locked in a closed position to provide extra protection against accidental gate openings, therefore they are more secure than non-locking carabiners.
